

## **QA Manager- Anchorage, AK**

TestAmerica is the leading nationwide provider of analytical testing services. Customers benefit from our national footprint and our focus on meeting the needs of local customers. The TestAmerica network offers a full suite of testing services including off-site laboratory testing, on-site mobile laboratory testing, sample pickup and field service, customized data packages and other ancillary services. Clients turn to TestAmerica for all of their analytical testing needs across water, soil, and waste.

TestAmerica's national network of environmental laboratories provides a full range of analyses for trace level organic, inorganic, radiological contaminants and air emissions. Company analysts are seasoned professionals with years of experience working for engineers, federal agencies and municipalities, as well as a broad range of commercial and industrial corporations.

### **Description**

The QA Manager is responsible for developing and implementing the laboratory quality system. Responsibilities include providing Quality Systems training to all new personnel, maintaining a Laboratory QA Manual, ensuring that the laboratory's quality system and QA Manual meet the requirements set forth by the company, arranging and managing PT samples, and performing systems, data, special, and external audits with both clients and regulatory officials. The QA Manager oversees the maintenance of QC records, maintains certifications, approves, develops, and maintains Standard Operating Procedures (SOPs), and assists in reviewing new work as needed. This position will be located in Anchorage, AK but will also support the QA duties for our location in Spokane, WA. Bi-monthly travel to Spokane, WA and the ability to manage work assignments remotely from Anchorage, AK is essential.

### **Requirements**

- B.S. in Chemistry, Biology or related field. 5-10 years related experience and/or training: or equivalent combination of experience and education.
- Possess an in-depth knowledge of QC criteria, laboratory procedures with knowledge of documentation requirements and environmental EPA methods.
- Communicate effectively with employees and other management staff.
- Ability to plan and organize to meet departmental and laboratory needs
